

# SYMBILITY

## WHO IS SYMBILITY?

Symbility Solutions automates property and casualty claims and their workflows for a faster, more efficient approach to managing claims. Through its suite of integrated products - Symbility Claims Connect, Symbility Inside Adjuster and Symbility Mobile Claims - Symbility provides software solutions to take your estimates from first notice of loss (FNOL) to settlement.

## SYMBILITY MOBILE CLAIMS

Mobile Claims is an estimating tool created for adjusters and contractors for decreasing claims cycle time and improving efficiency during the estimation process. Accessible from any PC, Mobile Claims incorporates measurements, diagrams and pricing databases to create estimates quickly, easily and, in many cases, in just one site visit.

Mobile Claims is designed for use at the claim site to reduce the number of site visits needed to complete a claim. With its one touch synchronization feature, the user is able to quickly transfer their estimate data to Claims Connect guaranteeing that all parties are working with the most up to date claims data.

## SYMBILITY INSIDE ADJUSTER

Inside Adjuster is a revolutionary new technology designed to create an initial estimate at the call center at FNOL. Internal Adjusters or Customer Service Representatives are visually guided through a simple six step process to collect all loss data while the insured is still on the phone and the details are still fresh in their mind.

Once an estimate is generated, Inside Adjuster offers various fulfillment routes for the claim. Dependent upon a company's mandates determining the complexity of claims, an estimate may be settled over the phone or escalated to another team member or outside adjuster for a more complex claim.

## SYMBILITY CLAIMS CONNECT

Claims Connect is a web based, collaborative workflow management tool that enables communication between all claims parties and all technologies.

This fully integrated claims solution connects claims technologies for a seamless flow of data from one system to the next. With its open architecture design and collaborative approach to workflow, all claims systems and all claims participants can work together with fewer delays, faster results and integrated data transfer.

The reporting and auditing capabilities of Claims Connect allow for proper management and analysis of claims data, employee and vendor efficiency and the overall workflow process within your company. With no hidden fees for accessing your data, reports and analytics are available to you instantly.

## THE SYMBILITY SOLUTIONS

Improve efficiency, integrate your existing claims systems and better manage your claims process. Contact the Symbility team today to learn more about Symbility's integrated suite of products.
